39TD Air Handling Unit

Air Flow: 2000–50000m³/h

Turn To The Experts

Inheriting a rich legacy of innovation including inventing modern air-conditioning, Carrier has been a global leader in innovations for Heating Ventilation Air Conditioning (HVAC) and refrigeration solutions. Carrier is a part of UTC Climate, Controls & Security, a unit of United Technologies Corp., a leading provider to the aerospace and building systems industries worldwide.

With a broad portfolio of advanced technical patent awards, our global R&D center in Shanghai develops innovative heat, ventilation and air-conditioning (HVAC) solutions.

In 1998, Time magazine named Dr. Carrier one of its 20 most influential builders and titans of the 20th century.

Identification & Dimension

39TD 020 E H1 L R 4 1 12 B W 0 A

Panel thickness

A- 25mm PU insulation

B- 50mm PU insulation

WET FILM HUMIDIFIER (wet film humidifier and heating coil is alternative)

0-NONE

1-50MM WET FILM HUMIDIFIER

2-100MM WET FILM HUMIDIFIER

COLOR OF EXTERIOR PANEL

W-WHITE (STD)

FAN DIRECTION: T-FT R-RU F-UF B-FB

FAN DIRECTION(UF is standard configuration for V1)

EXTERNAL STATIC PRESSURE

12-120Pa 17-170Pa 22-220Pa

27-270Pa 32-320Pa 37-370Pa

42-420Pa 47-470Pa 52-520Pa

57-570Pa 62-620Pa 67-670Pa

HEATING COIL (heating coil and wet humidifier is alternative)

1-1ROW

2-2ROWS

N-NONE

COOLING COIL

4-4ROW

6-6ROWS

OPERATION CONDITION

R-RETURN AIR CONDITION

F-FRESH AIR CONDITION

UNIT ORIENTATION (Facing discharge)

L-LEFT

R-RIGHT

UNIT TYPE

H1-HORIZONTAL STD1

H2-HORIZONTAL STD2

H3-HORIZONTAL STD3

V1-VERTICAL STD(DIGIT 6"C" FOR CEILING UNIT)

DESIGN SEQUENCE

VOLUME

020-2000m³/h 030-3000m³/h 040-4000m³/h 050-5000m³/h

060-6000m³/h 070-7000m³/h 080-8000m³/h 090-9000m³/h

105-10500m³/h 120-12000m³/h 135-13500m³/h 150-15000m³/h

180-18000m³/h 210-21000m³/h 240-24000m³/h 270-27000m³/h

300-30000m³/h 330-33000m³/h 350-35000m³/h 400-40000m³/h

450-45000m³/h 500-50000m³/h

PRODUCT SERIES

Unit Configuration

Diagram	Configuration	Fan Direction
	V1: Vertical standard unit	UF 
	H1: Horizontal standard unit	UF 
	H2: Horizontal standard unit	UR  FT 
	H3: Horizontal standard unit	FB 

NOTE:

1. Flange is standard, GI damper is option.
2. Hot water coil or wet-firm humidifier can be option.

NOTE:

1. For model 400D and above, the ex-fy transportation will be CKD
2. 39TD400~500 unit is double coil (up and down layout)
3. For the unit with wet film humidifier option, dimension will not change
4. For the unit with heating coil option, unit length will increase 200mm (refer to A' and E')
5. Flange height is 40mm
6. Heating coil and wet film is alternative.

NOTE:

1. 39TD400~500 unit is double coil (up and down layout)
2. For the unit with wet film humidifier option, dimension will not change
3. For the unit with heating coil option, unit length will increase 200mm (refer to A' and E')
4. Flange height is 40mm
5. Heating coil and wet film is alternative.

NOTE: The motor power data in bold is the motor power in rated ESP.

Structural Characteristics

Panel Structure: 25mm foaming double-panel structure with good rigidity and sound thermal insulation.

Filter

- Vertical and horizontal unit I employs external slide nylon nets.
- Horizontal unit II takes the structure of the panel's primary (G3/G4) slide.
- unit III takes the structure of the panel's primary (G3/G4) + bag intermediate (F5/F6) common slide.

Wet Film Humidifier

The wet film humidifier is made of hydrophilic materials, which is manufactured according to the principle of evenly distributing the moisture it absorbed to the material surface, which in turn, forms a water gasification layer that enables moisture to be evaporated, gasified, and absorbed by passing air. The thickness of the wet film can be 50mm or 100mm; depending on humidification capacity. The water supply volume shall be 3 times the humidification capacity.

Application Conditions

- Ambient temperature and humidity

Critical wind speed

Quality of water supply

State of water supply

Volume of water supply

Power supply
- Humidifier body: 5 - 80 ℃ ; below 90% RH

Lower than 3.75m/s

Tap water or Purified water

0.05 - 0.4Mpa, 5 - 40 ℃

2-3 times of the humidification capacity
withan external water supply interface
dimension of DN 15G1/2

AC 200V/50Hz

50mm Humidifi cation capacity of wet film (kg/h)	46	6.2	8.5	10	12.5	14.5	7	20	23	26	30	32.5	39	45	52	S3	64	70.5	75	79	89	100
100mm Humidifi cation capacity of wet film (kg/h)	9.2	12.4	17	20	25	29	34	40	46	52	60	65	78	90	104	116	128	141	150	158	178	200

Note: Humidify the wet film during the direct drain mode

Unit Installation

Where H = Excessive pressure inside the unit (mmH_2O) +20

Negative pressure inside the unit = Pressure of returned air + Filter resistance + Resistance of coil pipe

- A/C units in all structural types shall be installed on a level foundation.
- The periphery unit, especially the one at the side of the overhaul gate --between the piping unit and the fan, together with the motor-- shall be provided with enough space for routine inspections and periodic maintenance of the unit.
- The condensation water outlet must be connected first with a "U"-shaped drain pipe, before it is connected to the external pipes.
- When connecting the water inlet and outlet pipes of the coil pipe, you are required to apply a balanced force, instead of a violent force, to avoid damaging the coil pipe.
- The Motor of the A/C unit shall be connected to the power supply with an overload and grounding protection.
- A flexible connection shall be applied in connecting the A/C unit with an external air pipe to avoid vibration transmission.
- We can provide a special water seal to guarantee the smooth drain of the unit; should there be no unit foundation on site or the foundation is not high enough for the U-shaped water seal to be applied.

Unit Operation

- Before running the unit, check the valves of the water passages and air passages every time, to ensure a normal operating state.
- Regularly check the connections, operations, and transmissions of the moving parts, such as, the fan and motor; adjust as needed.
- Clean the primary filter with clean water or a cleaning agent -- according to its pollution degree; Clean as needed, based on the application environment.
- Clean or replace the intermediate filter when resistance increases to twice the initial resistance.
- Drain the water inside the coil pipe of the unit which is not used during the winter; keep the water, inside the coil pipe, flowing and close the outside air valve, if the unit is temporarily shut down in winter, to avoid freezing the coil pipe. For long-term shutdown, drain the water inside the coil pipe.
- Both hot and cold water shall be clean and softened water. Remove the water scale from the coil pipe by chemical methods; and dirt on the fin surface with compressed air or water, for every two-year operation of the unit.

Carrier improves the world around us; Carrier improves people's lives; our products and services improve building performance; our culture of improvement will not allow us to rest when it comes to the environment.
